

NUTRITIONAL TESTING

Agrifood Technology is specialised and equipped in providing nutritional testing to meet our customers' requirements.

For convenience we can provide our customers a standard nutritional package. This includes the following tests listed below:

- Moisture
- Fat
- Ash
- Energy
- Carbohydrates
- Protein
- Sugar
- Trans fat
- Saturated fat
- Poly Saturated fat
- Mono Saturated fat
- Sodium
- Omega 3, 6 & 9
- Dietary fibre

We can add additional tests to the above list to tailor to your prerequisite.

Nutritional panels are designed to provide consumers a detailed understanding of the nutrients composition in that particular product, acting as a guide for consumers who have dietary requirements.

Agrifood Technology strongly recommends customers to validate their nutritional panel on new product developments or performing standard quality control checks or even on reformulating an existing product. Our laboratory provides customers with accuracy results, faster turnaround and using advanced instrumentation and technologies in an analytical environment.

We are not limited to a standard nutritional panel, as we offer additional analytical testing such as allergens, residues and microbial to build your portfolio.
